## Education

**Bachelor of IT, Diploma of IT Professional Practice**

**University of Technology Sydney (currently studying)**

### **Major in Networking and Cybersecurity | Sub-Major in Information Security | Sub-Major in iOS Industry**

I am currently in my second year at University of Technology Sydney, maintaining exceptional academic performance with a distinction average across 72 credit points. My coursework encompasses critical IT disciplines including cybersecurity, network infrastructure, mobile application development, cloud computing, and system security. Key areas of study include Programming, Information Security, Web Systems and Servers, Databases, Enterprise Networking, and System Security

**William Clarke College**

### **January 2018 - December 2023**

I completed the NSW Higher School Certificate (HSC) at William Clarke College in 2023 with a strong focus on subjects relevant to the IT field, including Software Design, Science, and Mathematics. In year 11 I gained early entry to Macquarie University and Western Sydney University for degrees in Cyber Security, and to UTS for Computer Science and Cyber Security. I subsequently gained the required ATAR to accept an offer at UTS for a Bachelor of IT, Diploma of IT Professional Practice.

## Work Experience

### **IT Support Consultant CDM Computer Services - March 2025 - Present**

As an IT Support Consultant at CDM Computer Services, I deliver comprehensive onsite, remote, and helpdesk support to businesses across Australia within a managed services environment. This role requires strong communication, teamwork, and technical problem-solving skills, as well as the ability to manage multiple priorities across diverse client environments.

I diagnose and resolve complex technical issues across a wide range of platforms, with a strong focus on Windows-based systems while also supporting mixed operating system environments. I work extensively with Microsoft technologies, including Microsoft 365 administration, Active Directory, and on-premises, cloud, and hybrid infrastructures. This includes the management and support of on-premises domain controllers and Exchange servers, requiring a deep understanding of organisational IT systems and dependencies.

Beyond end user support, I am involved in deploying, configuring, and troubleshooting core infrastructure. This includes corporate networking tasks such as switch, router, and firewall configuration, fault isolation, and remediation at both the physical and logical levels. I also install, upgrade, and maintain hardware, software, and peripherals, while maintaining clear documentation and managing support tickets to ensure consistent service delivery.

In addition to MSP responsibilities, I work with our sister company, Quorix, which specialises in event networking and infrastructure. Through Quorix, I assist in the planning, deployment, operation, and monitoring of networks for large-scale events such as concerts and festivals. This includes building and

supporting resilient wired and wireless networks under tight time constraints, providing live operational support during events, and assisting with event CCTV deployments. These environments demand rapid troubleshooting, strong situational awareness, and the ability to perform reliably under pressure.

Across both business IT and live event operations, I consistently demonstrate resilience, adaptability, and strong self-management, contributing to secure, reliable, and high-performing technology environments.

## **IT Consultant, Business Operations Assistant Sweet Chocolate Warehouse, Baulkham Hills, NSW - January 2021 - March 2025**

Consulted on and implemented IT solutions to streamline business operations, demonstrating initiative and commercial awareness in identifying efficiency improvements

Managed IT infrastructure and systems across the organization, providing ongoing technical support and maintenance
